

PRODUCT INFORMATION

Innovative Spine Solutions

ErgoFlex – Anterior Replacement Disc

ErgoFlex – Lateral Replacement Disc

ErgoSpine is proud to present working prototypes for a line of total disc replacement products.

ErgoFlex

ErgoFlex is a spinal non-fusion, motion preservative disc replacement. It is:

- A long term solution
- Minimally invasive
- Allows for either full or partial motion rehabilitation
- Does not rely on bone to disc fusion to secure the disc
- Self-adjusting (a precise placement and positioning is not required)
- Allows for simple device removal if needed
- Provides a platform for fusion if needed

ErgoFlex is available in both a Lateral and Anterior models.

ErgoFuse

If a fusion is deemed necessary, the ErgoFuse spinal fusion disc replacement can do the job, offering similar longevity and ease of insertion as ErgoFlex.

Innovative Design

The original design of this patented technology enables both disc replacement products to provide Orthopedics and Neurological Surgeons with a flexible, easy-to-use solution. It allows for a much shorter hospital stay and faster recovery time for the patients.

ErgoSpine plans to offer easy-to-use insertion and removal instrumentation for both products.

About ErgoSpine:

ErgoSpine is a New Jersey based start-up company dedicated to providing innovative spine solutions that will positively impact clinical outcomes. At this time, the company is looking for a strategic investment.
